Your Sensors
Your Application

Applied Information has everything you need to add web based monitoring and control to your systems and products! Differentiate and get a competitive advantage by providing your support staff and customers with the ability to remotely:

Monitor:

- Temperature
- Humidity
- Location
- Power/Current
- Flow/ Levels
- and much more

Control:

- Pumps on/off
- Power on/off
- Flashers on/off
- Schedules
- Digital outputs
- and much more

Applied Information has developed both the tools and techniques to connect your business to the cloud and then to your users.

Connection Process

- Field devices or Software Apps collect data from your field device
- Data is sent to our cloud servers using a variety of wireless technologies
- Information is delivered to you and your clients via email, text or through a browser

Comprehending with Glance

- A custom set of business rules are established for your device type
- Data collected from the devices is measured against these rules
- Glance, the software that powers applied information, platform translates that data into easy to understand KPIs, graphs, charts and alarms, viewable on your smart phone, tablet, and PC
