

Glance Parking: Intelligent Parking Guidance System

Overview

Imagine pulling into a crowded airport, mall, or hotel, driving straight to an open spot lit with a brightly colored beacon, and walking straight in to your destination. No need to drive in circles, searching for spaces. No time wasted- more time to shop and you're frustration free? It's possible with Glance Parking!

Glance Parking provides parking sensors in every individual parking bay that detects the presence of a parked car. Small controller cards are installed in

sections, counting the number of available bays in its zone. Aggregates of various areas- per lane, per floor, even per parking structure are displayed on variable message signs. The end user is guided step by step to where the available parking is located, and then directly to the green light which indicates an available space.

Glance controls and manages the logic behind the system, while providing users with current data.

Benefits

- ✓ Quicker parking and more time in the shops by happier customers
- ✓ More efficient driving routes mean greener parking with reduced CO2 emissions in the parking structure
- ✓ Increased revenue from usage of every parking bay, even during peak times and seasons
- ✓ Reduce fraud with audits of parking revenue. You'll know exactly how long each bay is occupied.
