

## Waze Active School Zone Alert

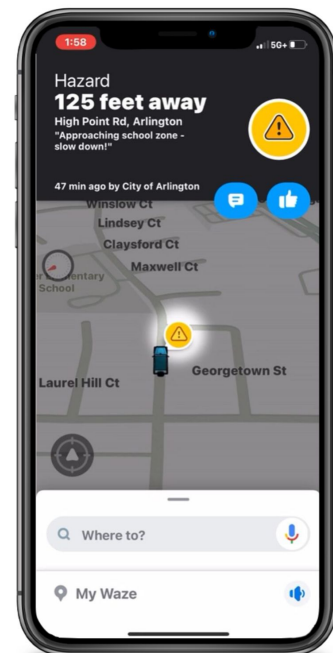

### Overview

Applied Information now offers seamless integration with the Waze navigation app, providing real-time alerts to drivers entering an active school zone along their route. These alerts are based on the unique school schedule, including holidays and exceptions, and late start or early release days, while additionally accommodating to unforeseen school beacon schedule changes. This dynamic system ensures that safety alerts are provided at the critical time when students, staff, and parents are entering or leaving a school zone. This innovative feature is available free of charge for new and existing Glance users, whose city is outfitted with the Glance Connected School Beacon System.

When a Waze user nears an active school zone, the driver is notified with an audible notification “Hazard reported ahead” and a visual alert reading “Approaching school zone – slow down!”. This integration creates an additional layer of safety for students in school zones, where alerts are automatically updated to reflect the real-time school flasher status.

### Features & Benefits

- ✓ Free for existing Glance users operating Glance Connected School Beacons
- ✓ Based on unique school zone schedules, while accommodating for unexpected schedule changes
- ✓ Real-time hazard alerts on the Waze app
- ✓ Improved school zone safety by reaching more drivers
- ✓ Additional layer of safety in school zones
- ✓ View live incidents on the online Waze map ([waze.com](http://waze.com))
- ✓ Waze integration available for other select Glance devices
